

Q2 The miniaturization and the enhancement of the efficiency of power of a high frequency circuit module used for a mobile wireless terminal, a pocket telephone and others in view of the mountability and talk time have been important objectives.

Pages 2 and 3, the paragraph bridging these pages from page 2, line 13 to page 3, line 10, replace the paragraph with:

Q3 Also, an example of a high frequency circuit module using a multi-layer (two-layer) dielectric substrate is shown in the proceeding of the 1997 Institute IEIC Conference Electronics Society C-2-14, "1.9 GHz RF Front-End Module Using a Ceramics Substrate" (hereinafter called second conventional technique). According to the second conventional technique, a transmission line which is a distributed constant element, an input-output matching circuit composed of a lumped constant element such as a resistor, a capacitor and an inductor and a semiconductor element are formed on the same surface of a dielectric substrate to compose a high frequency circuit module. A high frequency signal electrode provided to the surface of a first layer of the dielectric substrate and a high frequency signal electrode on the reverse side of a second layer are connected via wiring provided to the surface of the second layer through

Q3 a through-hole. The earth electrode of the semiconductor element provided to the surface of the first layer of the dielectric substrate and an earth electrode on the reverse side are connected via a through-hole. The order of the layers of the dielectric substrate are counted as a first layer, a second layer, a third layer, etc., from the surface to the reverse side.

Page 8, eighth full paragraph (lines 25-26), replace the paragraph with:

Q4 The present invention will be described in detail based upon embodiments below.

IN THE ABSTRACT

Please cancel the Abstract and substitute therefor the Abstract of the Disclosure on the attached separate page.

IN THE CLAIMS

Please cancel claims 1, 2, 5, 6, 9, 10, 13 and 14 without prejudice or disclaimer.
